

Contents

Chapter 1. Introduction	1
Chapter 2. General setting	3
2.1. Hilbert spaces, tensor products, operators	3
2.2. Basic tools	5
2.3. States on finite domains	7
2.4. Local observables and interactions	9
Chapter 3. Pressure and tangent functionals	13
3.1. Finite-volume pressure	13
3.2. Infinite-volume limit of the pressure	14
3.3. Tangent functionals and Gibbs states	18
Chapter 4. Gibbs variational principle	23
4.1. Finite-volume entropy	23
4.2. Infinite-volume limit of the mean entropy	24
4.3. Gibbs variational principle and Gibbs states	24
Chapter 5. Evolution operator and KMS condition	27
5.1. Finite-volume evolution operator	27
5.2. Infinite-volume limit of the evolution operator	28
5.3. The KMS condition	31
5.4. Equivalence with tangent functional states	33
5.5. The classical KMS condition	35
Chapter 6. Extremal Gibbs states	39
6.1. Extremal Gibbs states	39
6.2. Decomposition of states	41
6.3. GNS representation of states	42
Chapter 7. At high temperatures	47
Chapter 8. Spin systems	53
8.1. Spin operators	53
8.2. Hamiltonian and Gibbs states	55
8.3. Correlation inequalities - arbitrary spins	56

8.4. Correlation inequalities - spin $\frac{1}{2}$	57
Chapter 9. The Ising model	61
Chapter 10. Two-dimensional systems with continuous symmetry	63
Chapter 11. Long-range order via reflection positivity	67
11.1. Non-differentiability of the pressure from long-range order	67
11.2. Long-range order	69
11.3. Infrared bounds	72
11.4. Reflection positivity	79
Appendix A. Mathematical supplement	87
A.1. Proof of the Hölder inequality for traces	87
A.2. Trotter and Duhamel	89
A.3. About convex functions	90
A.4. Proof of the quantum Pinsker inequality	91
Appendix B. Solutions to some exercises	95
Appendix. Bibliography	97
Appendix. Index	99
